

INFANT WING-IMAGICA

Children are naturally wonderful at asking questions about the world around them, and these science activities and experiments give young minds the skill they need to seek answers .A science exhibition IMAGICA was organized at the Infant wing to kindle the desire to learn amongst students. Multifarious experiments were performed to demonstrate various science concepts to the students and strengthen their understanding (e.g. life cycle of a butterfly, sink and float, colour mixing, mirror maze and many more).

A musical play 'Balderdash the brilliant' was exquisitely performed by the teachers to satiate the inquisitive minds and curiosity of children about how colours came into life and how mixing of colours give a new colour. The students learnt with great enthusiasm and enjoyed show. It was a great learning month for the little ones.
